Frequency Response with Presets

The X 1 dp features integrated digital amplifier electronics with a DSP controller (dp = digitally powered). Various factory-configured presets and volume settings can be called up directly on the box or via a network connection.

High-grade electronic components from the industrial sector and a first-class circuit design ensure excellent audio quality with low distortion and a minimal noise floor. Highly efficient and “intelligent” limiter systems ensure optimum protection against overload, without restricting the possibilities offered by this high-performance sound system.

 [Presets > Quick Start Manual](#)

**Level**

Adjustment in 3 dB steps (-12 dB to +6 dB).

**Status**

**Mute LED**

Red light when the system is muted or under technically critical conditions.

**Limit LED**

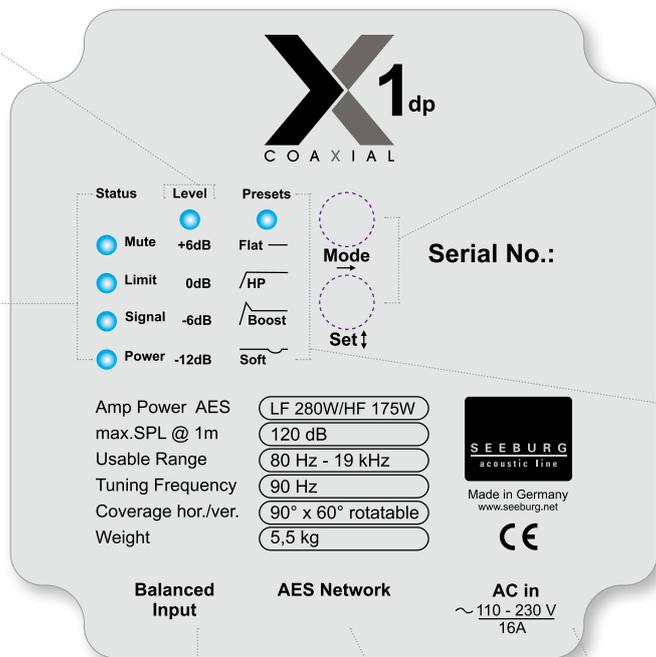

Yellow light when the limiter is restricting the level.

**Signal LED**

Green light when the input signal exceeds -20 dBu

**Power LED**

Green light when the system is switched on.

**Mode - key**

Switches between control modes: Status, Level and Presets.

**Set - key**

Setting of various values and Mute on / off.

**Presets**

**Flat**

This setting provides a linear frequency response with a neutral sound characteristics. Standard setting for many applications.

**HP**

Switches in a high pass filter for use in combination with a subwoofer.

**Boost**

The same neutral response as the „Flat“ setting, but with the addition of a bass boost.

**Soft**

Reduces the level in the frequency range from 2.5 - 5 kHz, to which the ear is particularly sensitive. This setting is recommended for high level reproduction of highly compressed music tracks.

**XLR**

- Symmetrical analog input.
- Effective filter protection against HF interference and DC Voltages.
- Electronically balanced to prevent noise.

**Ethercon**

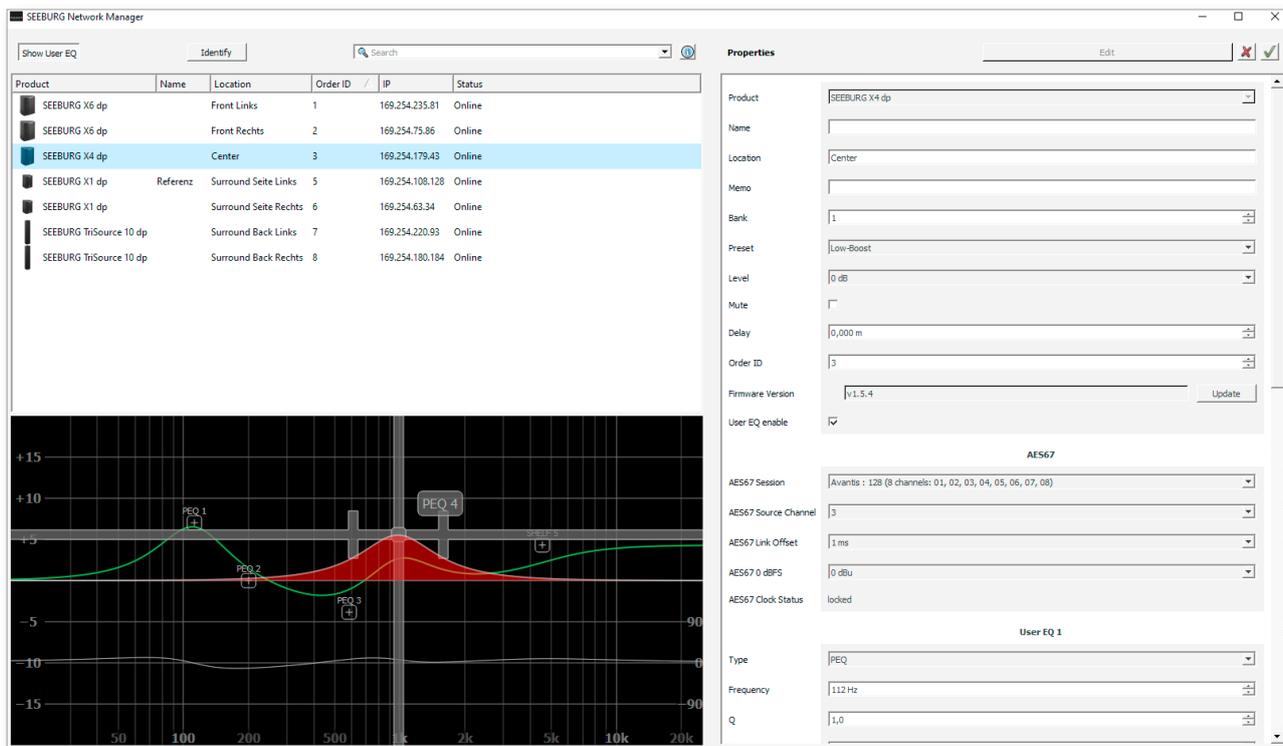

Interface for remote control and audio transfer via ethernet (AES 67).

**Powercon (blue)**

Power supply ~ 110-230 V / 16 A max.
